

Construction system: Sport Stand Roof

by INCOPERFIL

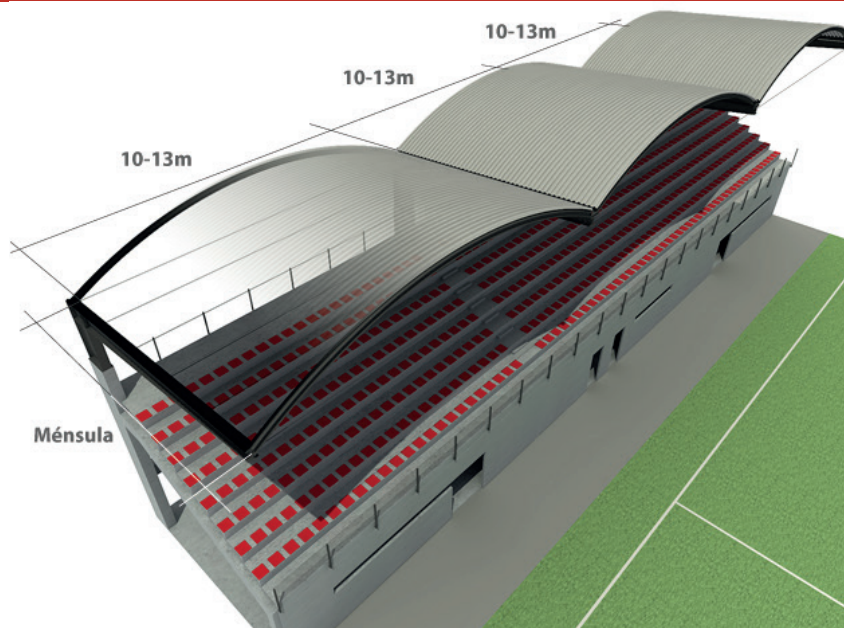

Description

The self-supporting cover system INCO 70.4 Curved allows stands covering harrows sports a simple and aesthetic. By this solution, the structure which may be metal or concrete will be available to a separation of beams up to 13 meters.

This is a cover that requires no maintenance and has high durability, depending on the coating material can guarantee up to 30 years.

It can supply different colors available in stock, or any specific color from the RAL on request.

This system could be installed in a short time.

Advantages

The advantages of the metal canopies with our freestanding curved roof are:

- Reduced weight of the structure against conventional structural systems.
- Improved appearance, away from industrial finishing flat canopies.
- High durability, since it is steel with protective polyester, which can have a guarantee of up to 30 years.
- Speed of execution, since the cover is treated as an element prefabricated and ready for installation.
- Efficient transport, the dimensions of the parts fit conventional transport.
- No maintenance required.

Spécificacions

- Max span: 13.30 m.
- Minimal Radius (R): 8 m with 0.80 mm thickness,
